Customer Segmentation Project

Project Overview

This project focuses on segmenting customers based on their behavior and demographic characteristics. Clustering techniques are used to group customers with similar purchasing patterns and preferences.

Key Features

1. Perform customer clustering using Python with Scikit-learn or Power BI.
2. Analyze customer demographics and purchasing behavior.
3. Identify customer groups with similar characteristics.
4. Analyze purchase patterns and customer preferences.
5. Visualize customer segments and key characteristics.

Tools & Technologies

Python • Pandas • NumPy • Scikit-learn • Matplotlib • Seaborn • Power BI

Expected Outcome

Gain practical experience in customer analytics, customer segmentation, clustering, data visualization, and extracting targeted insights from customer data.
